

Fireclay Sinks

Combining timeless beauty with perfect practicality

ABOUT 1901 SINKS

1901 Sinks is Australia's premium wholesaler of fireclay sinks. With over a decade of experience in the industry, we pride ourselves on quality, customer service and after sales service.

Sparked by the realisation that there was a gap in the market, 1901 Sinks was created to source reasonably priced, top quality butler sinks from the world's leading ceramic craftsmen. As the popularity of our sinks has grown, they have become a cherished feature of many kitchens, laundries and butler pantries across the country.

As a family run Australian company, our aim is 100% satisfaction for our distributors and customers. Our team has an in-depth knowledge and a detailed understanding of the products we sell and is there to ensure you receive the perfect sink for your home.

WHY CHOOSE FIRECLAY

Fireclay is a strong and durable material, used to handcraft sinks for hundreds of years. Sometimes confused with porcelain or ceramic, genuine fireclay is a reinforced clay, making it much stronger and ideal for everyday use. When combined with modern glazing technology, these sinks have a non-porous and stain-resistant surface with antibacterial qualities, enabling easy cleaning and maintenance.

Unlike other ceramics, fireclay is strong enough to withstand sudden temperature changes and ordinary knocks and bumps. Their resistance to heat, scratches, impact and cracks means fireclay sinks are suitable for kitchens, bathrooms, laundry rooms and outdoor kitchens.

The popularity of fireclay butler sinks is largely due to their combination of practicality and classic style. Each 1901 sink is uniquely handcrafted, defined by unique ripples and dimples that indicate its quality and add warmth and personality to your home.

Includes 32-40mm chrome waste fitting
Small inset lab sink, installed undermounted
or drop-in

1901 DRAINER

Model: AB1000

Counter top or recessed fluted drain board

CARE AND MAINTENANCE

Each 1901 fireclay sink is manufactured with a durable and non-porous finish which carries antibacterial qualities. This means your sink is odour and stain resistant and easy to care for. For cleaning, all that is needed is a soft sponge and a non-abrasive product, such as soap and water. We recommend against using any undiluted chemicals such as bleach.

As our fireclay sinks are handcrafted products, the graduation of the drain may be subtler than in more contemporary models; this means you may need to occasionally wipe the bottom of the bowl.

Occasionally grey marks or lines known as “silvering” may appear on the surface, caused by metal pans or cutlery. To remove these, we recommend using a fine car polish or a cream cleanser such as Jif, along with a non-scratch scourer.

Fireclay is more resistant to scratches, chips and stains than other types of ceramic, however care still needs to be taken, especially when using heavy items such as cast-iron pans.

INSTALLATION TIPS

Due to their handcrafted nature, the measurements of 1901 sinks can vary up to 2%. Ensure you have received and measured your sink before you begin cabinet and benchtop construction.

When installing a fireclay sink we recommend you seal between the sink and the benchtop. Any sealant used where the sink meets a stone benchtop needs to be flexible (we recommend mould resistant silicone) rather than rigid (like stone adhesive). This will allow for any difference in expansion rates between the stone and the sink.

When installing the waste fitting, it is important to use a continuous run of silicone sealant between the metal waste flange (the part that you will see in the sink around the plug) and the glazed sink itself. This prevents water from draining under the flange when the sink is filled. Please note that if surfaces are cleaned with a cloth dampened with mineral turps the silicone adheres very well. Also use the same cloth to clean up any excess silicone that squeezes out when the waste fitting is tightened. Ensure that the silicone is cleaned up before it dries.

WARRANTY

The 1901 range of fireclay sinks come with a 10 year replacement warranty against any manufacturing faults. Our fireclay sinks have proven their superior quality and customers can be confident they are installing a premium product.

Please ensure you follow the recommended installation tips when installing your 1901 sink. If our care and maintenance guidelines and installation recommendations are followed, you will be able to enjoy your fireclay sink for many decades to come.
